

Shop Management System

1. Problem Statement

The conventional shop/store management methods include hectic, tedious and time-consuming manual calculation/operation which is a heavy task for the Shop manager. Main features of Shop/Store Management are Inventory, Employee leave Records and Shopping History.

So, we have to design the Shop Management System which reduces the workload of Shop Manager and also helps him to manage the entire Shop more effectively and efficiently by shifting it to a digital and secured platform.

And it would be much better if we can include some user-friendly functionalities like Wish List which are popular on online shopping.

This software will enable the shop manager to manage the entire shop in an efficient and organized manner by providing functionalities such as- Inventory Management(Add/Remove/Update Items), check Shopping History, approve/reject Leave requests, Add new Employee, etc.

This software provides many features to employees and customers as well. Employees can sell items, update profile and also apply for leave using this. It also reduces workload of customers in remembering which items to buy by the help of Wishlist feature and also helps in managing their monthly shopping history. The customer can check product availability and shopping history at home with the help of this software.

This software can be accessed by Employee, Customer, Admin(Shop Owner) and also it will store Customer/Employee profiles which can also be updated.

2. Tasks Done

Shop Manager/Admin:

- Create account
- Account Login
- Inventory
- Add Employee
- Add/Remove/Update Item.
- Approve/Reject Leave
- Shopping History
- Feedback

Shop Employee:

- Update Profile
- Sell Items
- Account Login
- Apply for leave

Customer:

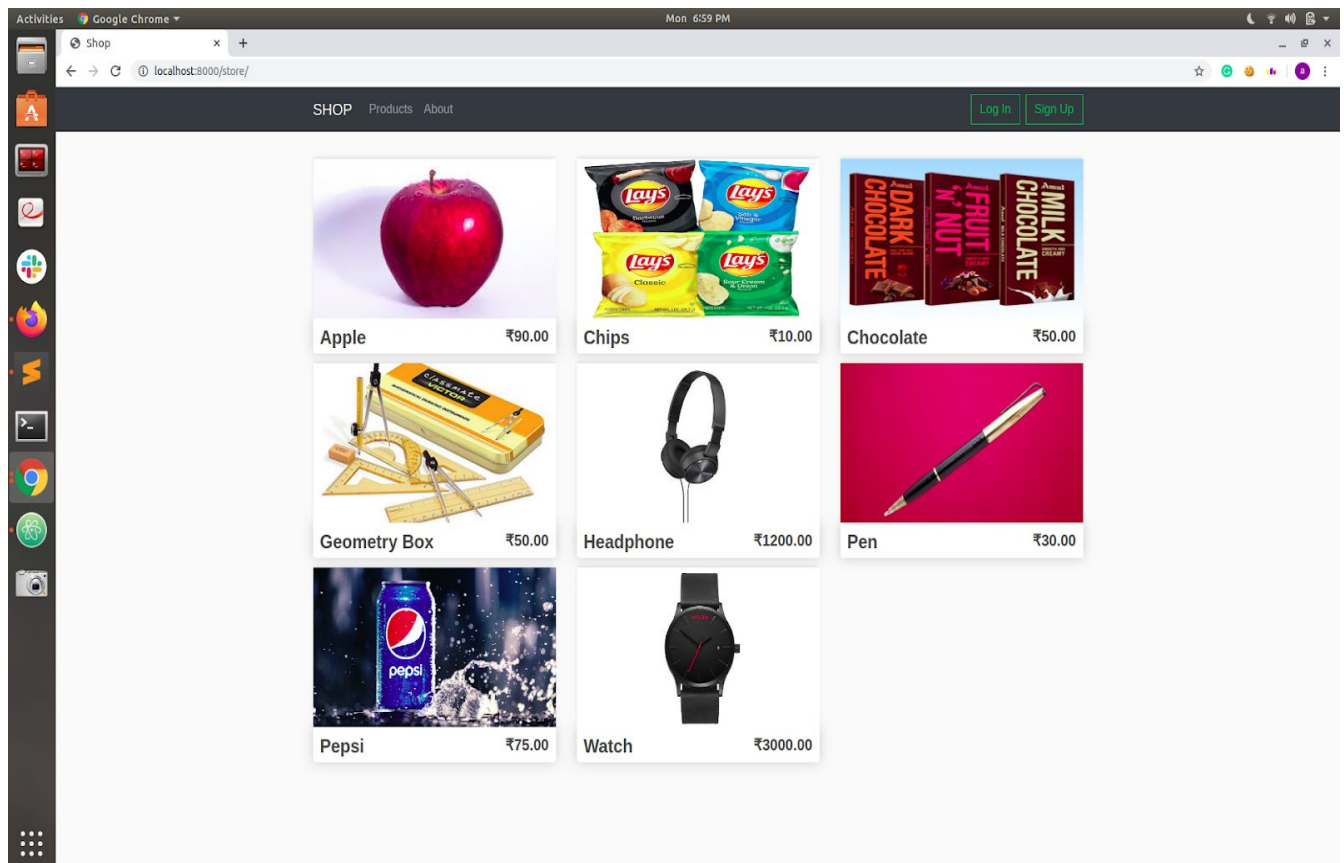

- Create Account
- Account Login
- Update Profile
- Product Detail/availability
- Check Shopping History
- Wish list

*Employee cannot create account because Shop Owner(admin) can only add new Employees to its shop.

3. Descriptions

I. FRONT-END

Homepage

Default Navbar

- Employee cannot sign up or create account because only admin can add employees to the shop.

Employee

Homepage

(logged in as employee)

Employee can add items to cart by clicking on add to cart button
And anytime visit the cart by clicking on cart-icon(on top-right).

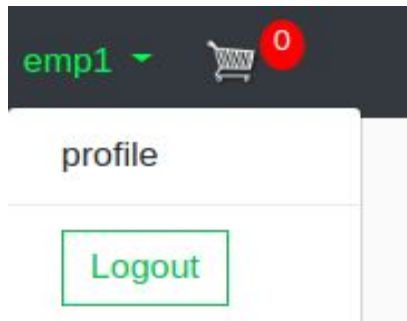

Navbar

Products: to items list(same as homepage)
Leave: apply for leave or check leave status
Update profile by clicking on username then profile button
Cart-icon can be seen at rightmost of navbar.

Profile

(same as customer)

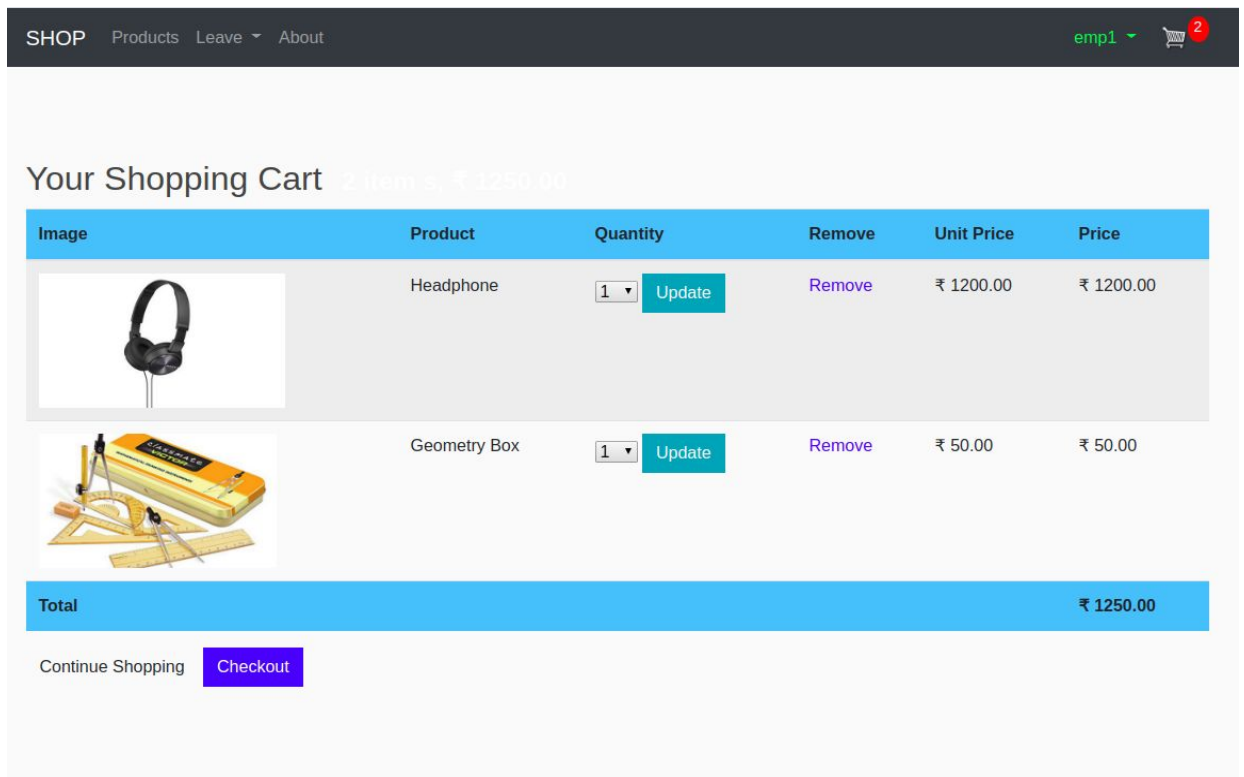

Sell Items

After adding items to the cart that the customer wants to buy just click on cart-icon.

1. Cart

Here we can add or remove items from cart and also check total price.

2. Checkout

Here the employee will fill customer details after asking him.

Leave

On clicking leave button in navbar two options will appear:-

Apply

Here Employee can apply for leave with proper date.

A screenshot of the 'Apply for Leave' form. The form has a title 'Apply for Leave' and a label 'Date time*' above a text input field. Below the input field is a 'Submit' button. The form is part of a page with the same navbar as the previous screenshot.

View

Check previous leave history and leave status.

A screenshot of the 'Leave History' page. The page has a title 'Leave History :'. Below the title, there are two entries, each with a profile picture of a person with red hair and a yellow background. The first entry shows 'Employee : ajay kumar', 'Date & Time : 28 may 10am-2pm', 'comments : okay', 'Status : approved', and a 'Cancel' link. The second entry shows 'Employee : ajay kumar', 'Date & Time : 5 june', 'comments : not possible', 'Status : rejected', and a 'Cancel' link. The page has the same navbar as the previous screenshots.

II. DATABASE

Database is implemented using sqlite, a prefeatured database given by django. All models for database are written in accounts/models.py, product_manager/views.py, orders/models.py, leave/model.py & wishlists/models.py

III. BACKEND

Backend is implemented using Python3.6.9 & Django2.2 . All functions are written with proper convention in accounts/views.py, product_manager/views.py, orders/views.py, leave/views.py & wishlists/views.py

In Django different modules are required to develop a system which are known as Apps. This system have 5 apps:-

- 1.accounts
- 2.product_manager
- 3.leave
- 4.cart
- 5.orders
- 6.wishlists

Github link: https://github.com/ajaykumarr123/shop_management

4.Guide to run project

(if some problem/error arises in first 3 steps then you can move directly to step4)

Step 1. Install python virtual environment :

```
pip3 install virtualenv
```

Step 2. Go to the directory where project is saved and create a new virtual environment new_v using the following command:

```
virtualenv -p /usr/bin/python3.6 envv
```

Step 3. Activate the virtual environment(on linux):

```
source envv/bin/activate
```

Step 4. Install django and its dependencies by these 2 commands:

```
pip3 install Django==2.2 django-autofixture django-extensions django-phone-field  
pip3 install celery==4.4.2 django-crispy-forms image django-rest-framework
```

Step 5. Execute the following command to run the server:

```
Python3 manage.py runserver
```

A screenshot of a terminal window titled 'ajay@ajay: ~/Desktop/shop_management'. The terminal shows the following commands and output:

```
ajay@ajay:~/Desktop/shop_management$ source envv/bin/activate  
(envv) ajay@ajay:~/Desktop/shop_management$ python3 manage.py runserver  
Watching for file changes with StatReloader  
Performing system checks...  
  
System check identified no issues (0 silenced).  
May 25, 2020 - 17:13:48  
Django version 2.2, using settings 'shop_management.settings'  
Starting development server at http://127.0.0.1:8000/  
Quit the server with CONTROL-C.
```

Now just visit <http://localhost:8000/> in your browser.

5.Further Enhancements:-

- Email verification
- Sending mail to customer after shopping with order id and total price (mostly done)
- Sending mail to Employee after leave approval
- Plot item vs profit
- Managing Employee Salary Record
